SORU

Get a value from the user. This value shows a temperature in degrees Celsius. Write the program code that shows equivalent temperatures in Fahrenheit and Kelvin degrees. Fahrenheit and Kelvin degree views and formulas are as follows.

FORMULA:

F = 1.80 * (C) + 32

K = C + 273.15

input1: **36**   #C cinsinden

output1: **F = 96.8**   # Fahrenheit

       K = 309.15   # Kelvin

input2: **28**

output2: **F = 82.4**   # Fahrenheit

       K = 301.15   # Kelvin
